

Phoenix Thermal Supply

Stock Silicone Rubber Enclosure Heaters

Silicone Enclosure heaters are used to maintain temperature in electrical boxes, ATMs, control boxes, traffic signals, vending machines, airframes, gas turbines, etc. They are also great for controlling humidity and moisture in enclosures. The heaters are typically mounted to an aluminium plate and include an air sensing thermostat. The plate has a flange with screw holes for easy mounting. Minimum heater width with a thermostat is 2". Maximum enclosure heater length is 40". The aluminium plate is 1/2" wider than the heater.

They are an excellent aid for your wing boots and other de-icing methods.

The following enclosure heaters are in stock for immediate delivery. Custom sizes and vulcanized shapes are available.

Phoenix **Thermal** Supply
